

Cloud Computing

As a distribution technology for computer power, cloud technology is one of the most important innovations of our time, comparable to the importance of mass production for industrialism. Basically, Cloud Computing is described as a stack of services where the basic layers are: SaaS, PaaS, and IaaS.

What technologies are we looking for?

- SaaS (Software as a Service) applications for end-users, usually delivered via the web.
- PaaS (Platform as a Service) a set of tools and services for coding and distributing software.
- IaaS (Infrastructure as a Service) is the hardware and software that drives servers, storage, networks and operating systems.
- Hybrid cloud, which makes it possible to segment information depending on security classification and provide good control over the environment.
- Edge is a technology complementary to the clouds, among other things realized with IoT, which addresses weaknesses with the centralized cloud structure. By moving the computing capacity closer to “things” and users, the requirements for response times, bandwidth, integrity and autonomy can be met.

What type of companies are we looking for?

- Size: 30-50 employees
- Geographical area: San Francisco Bay Area, CA
- Phase: pre-seed to Series A and/or positive revenue

Examples of startups in this area

Cogniac AI – cogniac.ai/product

What can we offer?

The IndTech Talent Attraction program is a project organized by one of the strongest industry clusters in Sweden, consisting of Automation Region and its 170 industry companies, ABB Synerleap, Electrification hub and Västmanland Region.

The aim of the Talent Attraction Program IndTech is to connect forefront technologies from Silicon Valley with world leading industry companies from Sweden, creating valuable trans-Atlantic collaborations, accelerating the transformation towards a digitalized, connected, and more sustainable industry of tomorrow!

Automation Region have connected hundreds of companies and organizations from many different industries and is in the center of the innovation pentagon. The Automation Region network, with 170+ active Swedish based industry companies, is a trust-based network where value is created by its members. ABB Synerleap global network with a long experience of working with startups and the full range of experts (both within ABB and from other global industry companies) we will utilize these abilities and networks to offer a talent attraction process that will be long-term and sustainable over time!
